## Codewriting 300

Check if the given string is a correct time representation of the 24-hour clock.

## Example

```
For time = "13:58", the output should be solution(time) = true;
For time = "25:51", the output should be solution(time) = false;
For time = "02:76", the output should be solution(time) = false.
```

## Input/Output

- [execution time limit] 4 seconds (py3)
- · [input] string time

A string representing time in HH:MM format. It is guaranteed that the first two characters, as well as the last two characters, are digits.

• [output] boolean

true if the given representation is correct, false otherwise.

## [Python 3] Syntax Tips

```
# Prints help message to the console
# Returns a string
def helloworld(name):
    print("This prints to the console when you Run Tests")
    return "Hello, " + name
```
