Codewriting 300

Given some integer, find the maximal number you can obtain by deleting exactly one digit of the given number.

Example

```
For n = 152, the output should be solution(n) = 52;
For n = 1001, the output should be solution(n) = 101.
```

Input/Output

- [execution time limit] 4 seconds (py3)
- [input] integer n

Guaranteed constraints:

```
10 \leq n \leq 10^6.
```

• [output] integer

[Python 3] Syntax Tips

```
# Prints help message to the console
# Returns a string
def helloworld(name):
    print("This prints to the console when you Run Tests")
    return "Hello, " + name
```
